**Application No.:** 09/866,765  
**Office Action Dated:** August 12, 2005

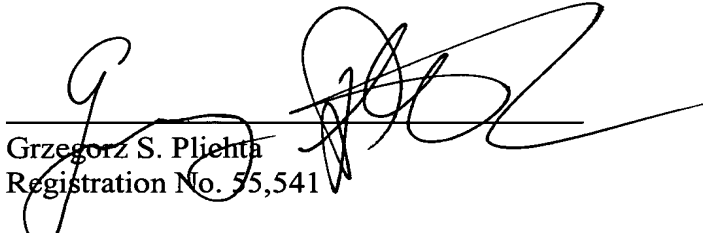

**PATENT**

### REMARKS

In response to the communication mailed on Jan. 11, 2006, Applicants have amended claim 11 in the following manner: "receiving an instruction signal component comprising instructions to form an interactive television client application program which defines a specified portion of a composite image as a location for a sensitive area, wherein the composite image is a combination of the primary video image and the secondary video image" (amended claim language underlined). Applicants believe this amendment is responsive to the Examiner's concern that "the applicant failed to distinguish as to whether the phrase on lines 4-5 in original claim 11...[should be] 'combined to generate a composite image of the primary and secondary images' is meant to be kept or deleted." *See Notice.*

If the Applicants have misunderstood the Examiner's concern, they ask the Examiner contact the undersigned at 206-903-2461 as soon as possible.
